Office Action Summary

Art Unit 1762

Claim Rejections - 35 U.S.C. § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Takeda et al. in view of Sendzimir taken with Takahashi et al.

The primary reference discloses in column 1, lines 20-65 and column 4, lines 25-40 a method of coating weld joints in a metal container body by application of a spray coating to the weld area and recovering coating material to prevent scattering of the coating material. The primary reference does not disclose a rotating spray head device. Sendzimir, column 4, lines 30-43 a rotating spray head and Takahashi et al. discloses reducing the gap between containers. It is the examiner's opinion that it would have been obvious having ordinary skill in this art at the time the invention was made to substitute the rotating nozzle of the secondary reference ~~to~~ for the nozzle of the primary reference and to reduce the gap between container since the secondary references teach this to be known in the art for producing uniform coatings and reduce waste. Also the limitations of the dependent claims are conventional and do not render these claims unobvious.
